NEW KAHLES HELIA RD

Designed for the intuitive shot

For the first time, KAHLES is presenting a reflex sight for driven hunt – the new HELIA Red Dot (RD). Its unique Anti-Reflexion coating for clear visibility and the precise 2 MOA red dot, designed to cover as little of the game as necessary, make it the ideal sight for an intuitive shot.

The Anti-Reflexion coating provides an excellent image, without any distracting reflections over the entire field of view, while the precise 2 MOA dot allows for minimal target coverage. The red dot can be manually adjusted in four settings for different lighting conditions and the automatic light function saves valuable energy when not in immediate use. With the accurate and reliable Easyclick adjustment mechanism, sighting in becomes an easy task. Furthermore, the new HELIA sight combines a straight, robust design with easy to use operation elements. The battery compartment can be opened with a coin or a cartridge, making battery change simple and easy. Beside an orange protection cap with integrated slot for a spare battery, the HELIA RD comes together with a Picatinny/Weaver mount.

It will be available in stores starting January 2019 for a retail price of US\$ 399,-

Automaticlight	✓
Battery type	CR2032
Rubber cover with spare battery shelf	✓
Picatinny/Weaver mount	✓
Warranty (years)	2

KAHLES – since 1898

In the course of its 120 years' company history KAHLES has set many milestones. Today we develop and produce at our facility in Guntramsdorf near Vienna, far-optical precision devices at highest technical standards for ambitious shooters and hunters. We do that with uncompromised focus on the real essential, based on profound user insight and a wealth of know-how.
