NEW KAHLES HELIA RD-C

Robust red dot sight for driven hunt

Figure scale 1:1 = original size

With the new HELIA Red Dot closed (RD-C), for the first time KAHLES is presenting a closed and robust red dot sight to the market, which has been designed for driven hunting and for use in the most adverse conditions. With an anti-reflection coating for a clear view, a precise 2 MOA red dot for minimum coverage on the wild and special safety details, it's the ideal targeting aid to help you make that safe shot.

The anti-reflection coating used provides the best image quality across the entire field of view. The precise red dot ensures low target coverage and can be manually adjusted to the ambient light with four (+1) levels. The MAX LIGHT function, which activates an extremely bright illuminated dot, helps in particularly difficult lighting conditions and with backlighting. The intelligent automatic switch-off function of the Automaticlight ensures that the device is switched off automatically when not in use.

The especially developed SAFE LIGHT function is new and comes in particularly handy, for example, when hunting animals that are able to defend themselves. It prevents the brightness of the illuminated dot being accidentally adjusted and deactivates the Automaticlight of the illuminated dot until it is manually reactivated again.
